

## UART 2 AHB Debugger

UART2AHB is a combination of semiconductor IP and software that allows the user to have access to the on-chip AMBA AHB Bus via a serial connection. It can be used as a simple method to get visibility of all on-chip peripherals.

### Features

- RS232 UART
- AHB2.0 master interface for direct transfers to memory
- Debug
  - read/write to any memory location
  - Memory dump
- Unix External application provided in C source
